

Facial esthetic enhancement for hemifacial palsy patients.

Meisan Ali Bukhari, BDS, SBP

Jeddah Specialty Dental Center-MOH, KSA

Abstract:

The first item of beauty is the face, and it is the first page of knowing a person. Impairment facial esthetic of a 50 years old partially edentulous male, by asymmetry due to weakness of the facial muscles caused by permanent facial paralysis lead to psychological problems and isolation of patients. Palliative prosthetic treatment for this patient using removable appliance improved his esthetic by improving fullness and support of the face on the effected side. Therefore enhanced his self esteem.
